CZECHOSLOVAKIA/Electronics - The Application of Electronics and Vacuum Technique. H

Abs Jour : Ref Zhur Fizika, No 2, 1960, 4048

Author : Hiebsch, W.

Inst : ..

Title : On Vacuum Thermocouples

Orig Pub : Slaboproudy obzor, 1959, 20, No 1, 8-12

Abstract : In general outlines, the author describes the operating principle, construction, characteristics, and application of measurement vacuum thermocouples of the Peoples Enterprise ZPA (Czechoslovakia). The criterion of the quality of the thermocouple is proposed to be the ratio of the thermal emf produced by the thermocouple to the square of the current flowing through the load. It is indicated that in the case of precision work with such thermocouples, it is necessary to take into account the dependence of the thermal emf on the temperature.

PERIODICAL: Referativnyy zhurnal, Metallurgiya, no. 12, 1962, 40, abstract
12E247 P (Czechosl. Patent no. 101212 of October 15, 1961)

TEXT: The torch for resistance spot-welding assures a concentration of heat at the welding spot; this is particularly important in the welding of plates. Heat concentration is produced by mechanically clamping the parts to be welded by a mandrel-type clamping device, concentric to the upper electrode, and by the passage of welding current through the electrodes. A capacitor or a battery is used as a power source.

Delphinium and Their Use in Taxonomy.

Orig Pub: Preslia, 1957, 29, No 2, 168-185.

Abstract: Representatives of the family Ranunculaceae, order Ranunculales in an evolutionary series belong to young forms of plants, which is expressed in significant variability of the flower type, particularly in the Delphinium. For their correct determination, as well as for selection work, it is important therefore to establish the differences between delphinium varieties and to give their classification. The investigation in horticulture was con-

ORG: Department of the Design of Mathematical Machines of the Warsaw Polytechnical Institute (Katedra Budowy Maszyn Matematycznych Politechniki Warszawskiej)

TITLE: The series-parallel ferrite core memory unit of the ^{16C} AMC-1 ^{16C} computer

SOURCE: Warsaw Politechnika. Zeszyty naukowe, no. 118, 1965. Elektryka, no. 43

TOPIC TAGS: computer, computer component, computer memory, computer research, memory core

ABSTRACT: A ferrite memory unit is described which was designed as a component part of the AMC-1 computer. The bases of the logical memory unit were determined in stricter harmony with the internal organization of the computer than is the case in many other computers in accordance with which the memory storage capacity was fixed at 48 bits per 400 words. The AMC-1 computer is the administrative computer designed and built at the Department of the Design of Mathematical Machines of the Warsaw Polytechnical Institute. Thanks to the series-parallel mode of operation and to the four access channels, proposed by Dr. K. Bienkowski, better operation with a digital computer is assured than when using the typical parallel connected memory, and electronic memory storage systems have been simplified. The memory unit described is

TITLE: Manufacture of non-alloyed and alloyed seamless boiler tubes 4

SOURCE: Neue Hutte, no. 11, 1964, 673-680

TOPIC TAGS: steam boiler, pipe, metal test

Abstract: A review was made of the raw materials, manufacturing processes, economies, and testing of non-alloyed and alloyed seamless boiler tubes. In the German Democratic Republic such tubes are manufactured by hot-forming, cold-forming, sulfuric acid-immersion treatment, heat treatment, and final finishing. The specifications dealing with seamless boiler tubes were discussed and methods for testing and evaluating such tubes were described. Orig. art. has 9 figures and 7 tables.

"Contribution to the Problem of the Relationship Between the Sympathoadrenal System and the Thyroid Gland."

Prague, Ceskoslovenska Fysiologie, Vol 15, No 2, Feb 66, p 102

Abstract: 8 healthy subjects, 9 patients suffering from neuro-circulatory asthenia, and 30 from thyrotoxicosis were used in an experiment to study the influence of blockage and tone increase of sympathicus on pulse frequency. The blockage resulted in a frequency decrease in the patients from 100 to 80-90, with no influence on controls. The orthostatic changes were in controls 77-91, in patients from 100 to 110-120. No references. Submitted at "16 Days of Physiology" at Kosice, 29 Sep 65.

AUTHOR: Hilczer, Tadeusz

TITLE: Dielectric saturation of polar liquids under high hydrostatic pressure

SOURCE: Poznańskie Towarzystwo Przyjaciół Nauk. Komisja Matematyczno-Przyrodnicza. Prace. v. 11, no. 1, 1962. Fizyka dielektryków. no. 1, 39 - 63

TEXT: This paper was presented on October 19, 1961 at a meeting of the Komisja Matematyczno-Przyrodnicza PTPN (Mathematical and Scientific Committee, PTPN). The dielectric saturation of benzene, nitrobenzene, o-nitroanisole and 1,2-dibromomethane was measured at room temperature in fields up to 70 kV/cm. The saturation was deduced by measuring the change in capacitance due to application of a strong field. The measurements were carried out using the beat method with an oscillograph detector (A. Chelkowski, Acta Phys. Pol., in press). The measuring capacitor was placed in a pressure vessel and up to 700 atm. were applied to it. The liquids were purified before tests by double or triple distillation, followed, in the Card 1/2

Dielectric saturation of polar ...

case of nitrobenzene and 1,2-dibromomethane, by filtering through Al_2O_3 . For benzene the dielectric saturation $\Delta\epsilon^e$, defined as the change in permittivity ϵ due to application of a strong electric field, was zero at all pressures. For the other three liquids the dielectric saturation, $\Delta\epsilon^e/\epsilon$, was of the order of 10^{-4} . The saturation was positive and increased with pressure for nitrobenzene; for o-nitroanisol it was negative and its absolute value decreased with pressure. For 1,2-dibromomethane it was positive and decreased as pressure increased. The results are interpreted in terms of Piekara's theory. Acknowledgement is made to Professor Doctor A. Piekara for his advice and help. There are 18 figures and 2 tables. ✓

TITLE: Relief maps

PERIODICAL: Referativnyy zhurnal. Astronomiya i Geodeziya, no. 1, 1962, 24, abstract 1G172 ("Przegł. geod.", 1961, v. 33, no. 7. 283-284, Polish)

TEXT: The author describes experimental work on constructing relief maps in Poland. The making of such maps became possible after mastering the process of preparing thermoplastic sheets. The first relief map on the 1:5,000 scale was made by the Institute of Geodesy and Cartography in 1958. The second experiment of constructing the physical map of Poland on the 1:2,000,000 scale was less successful. Specific difficulties of constructing relief maps for the territory of Poland, 4/5 of whose area is a plain, are noted.

The abnormal ultrasound absorption in MgSO_4 solutions.
A. Hill. *Acad. rep. populara Rominae Inst. fis. atomica si
Inst. fis. Studiis cercatori* fis. 10, 633-7 (1959). The con-
ditions concerning the 2nd crit. frequency of relaxation
(the 1st is in the range of 150 kc.) disappear if it is assumed
that the abnormal absorption at frequencies higher than 1
Mc. is due to the superposition of 2 abnormal absorption
causes. Analysis of the phenomena revealed not only the
2nd crit. frequency of relaxation in the region of 7 Mc.,
but also a 3rd crit. frequency, in the range above 100 Mc.

1985. A COLLECTOR-TYPE SERVO MECHANISM. 521-416
 Skopovskiy Obzor, Vol. 18, No. 10, 877-81 (1957). In Russian.
 The system consists of two collectors and a d.c. servomotor.
 The input collector, K_1 , has a number of equi-distantly spaced
 brushes which are connected with the corresponding brushes of the
 output collector, K_2 . K_2 is fitted with a number of conducting seg-
 ments, half of which are kept at a voltage $+V$ (by means of a slip
 ring), while the others are at a voltage $-V$. K_2 is fitted with a
 similar set of conducting segments, whose output is applied to the
 motor by means of two slip rings. If K_1 is deflected a certain
 amount, one of the segments of K_2 will receive the voltage $+V$ or
 $-V$. The motor will then operate and deflect K_1 by a nearly equal
 amount. The system can be used instead of a selsyn-type trans-
 mitter. One of its advantages is that the motor can be driven
 without employing an amplifier. Operation of the device is analysed
 in some detail and some of the principal design formulae are
 derived.
